

Grab-Tab[®] Technology

A patented, manufacturer-integrated accessibility feature for pressure-sensitive adhesive products

U.S. UTILITY PATENT
12,417,718 B1 • Issued Sept. 16, 2025

WHAT IT IS

Grab-Tab[®] Technology is a patented perforation and fold-over system that creates an easy-to-find, non-adhesive pull tab on a roll-based adhesive product. The feature is designed to be incorporated into a manufacturer's existing product line—not sold as a separate tape brand—so the licensee retains its materials, branding, packaging, distribution and customer relationships.

HOW THE SYSTEM WORKS

The user locates the formed tab, pulls the required length, folds the tab under to one side, presses it to bond the layers, and detaches the piece at the precision perforation. Removal of the current piece leaves the next accessible tab prepared on the roll.

GRAB → PULL → FOLD → PRESS → DETACH → NEXT TAB READY

No picking. No peeling. No searching for the tape edge again.

MANUFACTURER INTEGRATION & LICENSING

Grab-Tab is offered as a licensable value-added feature for existing converting and manufacturing operations. Licensing can support confidential evaluation, engineering review, prototype development and category-specific adoption. Manufacturers select the brands, formats, materials and markets where the feature adds the most value.

VALUE TO THE LICENSEE

- Patented differentiation for established product lines
- Easier, faster and more controlled dispensing
- Premium positioning and added consumer value
- Licensee retains its brand, channels and customer relationships

PRODUCT APPLICATIONS

Painter's and masking tape • Packaging tape • Electrical tape • Gaffer and cloth tape • Labels and identification products • Specialty pressure-sensitive adhesive formats

IP & COMMERCIALIZATION STATUS

- U.S. Utility Patent No. 12,417,718 B1
- Complementary U.S. design-patent protection for the triangular geometry
- Cam-Tape[®] serves as a working proof of concept
- Current demo supports licensing review
